CLIENTS AND PROJECTS

Environmental Protection Agency (EPA), Washington, DC

- Bright Rain provides application and consultation services to the EPA in support of mapping the results of the Clean Watersheeds Needs Survey (CWNS). Services include the development of a custom web mapping application in conjunction with an application developed and hosted within the EPA GeoPlatform.

City of Seattle – Seattle Department of Transportation, Seattle, WA

- Development of several web map applications using ArcGIS Server JavaScript API including; the Seattle Parking Map designed to provide the public with real-time information regarding parking options within the City, the Construction Coordination Map application designed to provide the public with information about planned construction projects and events within the City, and an internal web map application to manage and issue street use permits within the Department.

City of Seattle – Seattle Public Utilities, Seattle, WA

- Development of a custom set of .Net tools to identify potential flood polygons within the City of Seattle based on closed contours.
- Enhancements to existing, custom GIS data editors using Visual Basic.
- Development of custom functions to convert cadastral data previously maintained as ArcInfo coverages to true curves offered in the new ArcSDE geodatabase.

Antares Group, Landover, MD

- Map interface development of a web based contract management tool that facilitates the management of contractual obligations between crop producers and biomass processors. The front end technology uses the Leaflet mapping JavaScript library to present tile layers created with TileMill and hosted with MapBox that shows critical areas and labels. The user can interact with fields, storage and access locations managed as vector graphics as well as enter and search associated tabular data. The interface interacts with a backend api exposed via the ASP.Net MVC framework.

PACE Engineers, Seattle, WA

- Implemented GIS at several water and sewer utility districts including the development of custom applications in support of asset inventory with GPS, development of asset management systems using ESRI software, integration between legacy database systems and GIS, and creation of network models. Implementation of GIS based maintenance management systems.

Your Castle Real Estate Services, Denver, CO

- Development of a web based real estate tool that consumes the Microsoft MapPoint Web Service and calculates an estimated value along with selected statistics. This web application was developed using ASP.Net and Visual Basic.Net.

US Forest Service – Mt. Baker / Snoqualmie National Forest, WA

- Assessed dispersed recreation impact on fish populations in riparian areas. Geographic analysis included identifying high impact sites and high impact area using raster analysis. Analysis conducted with ArcGIS 8.3, Excel, and Visual Basic for Applications (VBA).

Colorado State Parks

- Instrumental in completing a comprehensive survey study. Roles included: mapping visitor distribution, data collection, data analysis and reporting.
- Trail Use Distribution Study at Castlewood Canyon State Park.
